Professional Summary

Site Reliability Engineer with 5+ years of experience managing large-scale Linux production infrastructure, incident response, and automation. Skilled in improving system reliability through infrastructure automation, monitoring optimization, and root cause analysis. Experienced with Linux, AWS cloud infrastructure, Kubernetes, Terraform, and DevOps tooling, with a strong focus on reducing operational toil and improving system availability in high-scale environments.

Technical Skills

Programming: Python, Bash, Shell Scripting, Data Structures & Algorithms (Basic)

Operating Systems: Linux (RHEL, CentOS, Debian)

Cloud Platforms: AWS (EC2, EBS, S3, Route53, EFS, Systems Manager), Google Cloud Platform

Containerization & Orchestration: Docker, Kubernetes

Infrastructure as Code: Terraform, Ansible

DevOps Tools: Jenkins, Git, CI/CD Pipelines

Infrastructure: RAID, LVM, Filesystems, Production Servers

Networking: TCP/IP, DNS, HTTP, DHCP, SSL/TLS, VPN

Monitoring & Observability: Splunk, Nagios, Monitoring, Alerting, Log Analysis

SRE Practices: Incident Management, Root Cause Analysis (RCA), SLA/SLO, MTTR Reduction, Postmortems, On-call Operations, Run-books

Professional Experience

IBM — Site Reliability Engineer

Jan 2025 – Present

Bangalore, India

- Maintain reliability of large-scale cloud IaaS infrastructure supporting enterprise production workloads in a 24x7 environment.
- Lead P1–P3 incident response and coordinate cross-team war rooms to restore services within defined SLA/SLO targets.
- Serve as Incident Commander during high-severity outages, driving mitigation strategies and stakeholder communication.
- Reduced Mean Time To Resolution (MTTR) by 25% by improving troubleshooting workflows and operational runbooks.
- Conduct Root Cause Analysis (RCA) and publish postmortems to prevent recurring production incidents.
- Troubleshoot complex Linux issues involving RAID failures, LVM inconsistencies, filesystem corruption, and service crashes.
- Diagnose infrastructure networking failures including DNS issues, SSL/TLS misconfigurations, and VPN connectivity problems.
- Improved monitoring signal quality by tuning alerts and thresholds, reducing alert fatigue for on-call engineers.
- Automated operational tasks using Python and shell scripting, reducing manual operational toil.

Tata Consultancy Services — Linux System Administrator

Oct 2020 – Dec 2024

Bangalore, India

- Administered and maintained 350+ enterprise Linux servers ensuring high availability and performance.
- Executed RHEL 7 to RHEL 8 migration across 350 servers with near-zero downtime.
- Automated infrastructure operations using Bash and Ansible, reducing manual operational tasks by 80%.
- Developed self-healing automation scripts reducing system downtime by 90%.
- Automated Splunk agent upgrades across 2000+ servers using Ansible playbooks.
- Implemented system hardening and vulnerability patching reducing security risks by 70%.
- Managed Linux storage including RAID arrays, LVM volumes, and filesystem configurations.

- Configured and maintained network services including DNS, DHCP, and NFS.
- Monitored system performance using Splunk to analyze CPU, memory, disk, and network metrics.
- Supported DevOps workflows including Jenkins pipelines, Git version control, and Docker container deployments.
- Managed AWS infrastructure including EC2, EBS, S3, Route53, and EFS.
- Implemented automated patch management using AWS Systems Manager.

Projects

Infrastructure Automation Platform

- Built automation workflows using Ansible, Python, and Bash to automate Linux server patching and configuration management.
- Designed health-check and remediation scripts to detect failures and automatically restore services.

Containerized Microservices Deployment

- Deployed containerized applications using Docker and Kubernetes to simulate production-grade microservices environments.
- Implemented monitoring and logging for container workloads to improve system observability.

Infrastructure as Code Environment

- Built cloud infrastructure using Terraform to provision compute, storage, and networking resources.
- Implemented repeatable infrastructure deployment workflows to improve scalability and environment consistency.

Certifications

Red Hat Certified System Administrator (RHCSA)

AWS Certified Solutions Architect – Associate

Education

Bachelor of Engineering — Automobile Engineering

New Horizon College of Engineering

CGPA: 8.88 / 10
